Trần Ngọc Minh Thông

FLUTTER MOBILE DEVELOPER · FULL-STACK BACKGROUND · 4+ YEARS

Flutter developer who ships production POS/ERP software and owns the backend behind it. At Nasys I lead a ~777K-line Flutter client on Clean Architecture (24 feature modules, 5 printer drivers, hand-rolled ESC/POS stack) and the 19-domain Laravel modular monolith it talks to. 4+ years of Laravel / React / Vue / Node before that. Daily AI-assisted workflow with Claude Code and Cursor — AI drafts, I design and review.

TECH STACK

MOBILE · FLUTTER

Flutter · Dart · Riverpod (code-gen) · Clean Architecture · Retrofit / Dio · AutoRoute · ESC/POS printing · BLE / USB / Serial · Socket.IO · FCM · flutter_test · Android / iOS / Web

AI-ASSISTED ENGINEERING

Claude Code · Cursor / Copilot · Agent context docs · Spec-driven prompting · AI code review · AI test generation

BACKEND

Laravel · PHP · Node.js · REST API · MySQL · PHPUnit

ARCHITECTURE

DDD · Modular monolith · Multi-tenant · Strangler migration · Event-driven · RBAC

FRONTEND

React.js · Vue.js · TypeScript · Redux Toolkit · Tailwind CSS · WebGL / Three.js

INTEGRATIONS & TOOLS

Stripe · VNPay / VietQR · Firebase · Shopify API · OAuth 2.0 · i18n · Git / GitHub Actions · Figma

EDUCATION

Industrial University of Ho Chi Minh City

B.S. Information Systems

2018 — 2022

HIGHLIGHTS

- **Flutter at scale:** lead developer on a ~777K-line Dart POS/ERP client — Clean Architecture, feature-first, 24 feature + 15 shared modules, 440 use cases, Riverpod code-gen, 325 test files, 5 locales, Android / iOS / web.
- **Hardware & printing:** hand-rolled ESC/POS stack — 5 printer drivers (LAN / Bluetooth / USB / Sunmi / iMin), Vietnamese thermal rasterizer, per-printer FIFO queue; integrated scales, fingerprint clocks, serial QR-payment boxes, customer displays.
- **Backend ownership:** restructured the Laravel backend into a 19-domain modular monolith (698 use cases, 5 API surfaces, database-per-tenant, 608-key RBAC); tests 251 → 935.
- **AI-assisted engineering:** daily Claude Code + Cursor workflow — architecture standard as agent context, spec → scaffold → human review; money, stock and hardware code stays hand-written.

EXPERIENCE

Flutter Mobile & Full-stack Developer

02/2026 — Present

Nasys · F&B POS/ERP

`Flutter` `Dart` `Riverpod` `Clean Architecture` `Laravel` `PHP` `MySQL` `Socket.IO` `ESC/POS` `PHPUnit`

- Lead Flutter developer on a multi-tenant, multi-branch **restaurant POS/ERP** (ordering, payments, kitchen tickets, inventory, HRM, tax) running on counter tablets, Sunmi/iMin handhelds and web — and owner of the Laravel backend serving it.
- Migrated a 99K-line Flutter monolith to **Clean Architecture + feature-first**: 24 feature + 15 shared modules, 440 use cases, 246 entities, 611 API endpoints, all DI/state on code-generated Riverpod; 325 test files. Wrote the 1,236-line architecture standard the team — and the AI agent — build against.
- Built the **ESC/POS printing stack** from scratch: 5 hardware drivers (LAN / Bluetooth / USB / Sunmi / iMin), 11 receipt builders, a Vietnamese-diacritics rasterizer for thermal heads, and a per-printer FIFO queue that runs printers in parallel without a failed job deadlocking the rest.
- Integrated POS peripherals — digital scales, fingerprint clock-in, serial QR-payment box, customer-facing secondary display — plus Socket.IO realtime with event de-duplication across overlapping channels and FCM push.
- Designed **Proportional Canvas Scaling** (scale the POS layout uniformly instead of reflowing it, so cashiers keep muscle memory across devices); cut cart-tap rebuilds of a 100+ item grid by isolating CartState behind ChangeNotifier/ValueNotifier + RepaintBoundary.
- **Backend:** restructured a God-Controller codebase (CartController: 7,388 lines / 53 methods) into a **19-domain modular monolith**, 698 use cases, one Action serving all 5 API surfaces; strangler migration to API v2 (17/17 domains, ~716 routes) with zero changes to legacy code or schema; merged a separate HRM app in 9 porting waves.
- Hardened money-flow and stock concurrency with single-write-point Actions, claim mutexes, `lockForUpdate` and cache locks; grew the backend test suite from 251 to **935 tests**.
- **AI workflow:** used Claude Code to scaffold feature modules and port legacy controllers against the written standard, one reviewed pull request per wave; used it to audit the legacy codebase (found `SysParameter::all()` duplicated across 22 controllers and 3 forked `worktable()` copies, 2 of them computing overnight shifts wrong) and to draft tests I verified by hand.

Full-stack Web Developer

01/2025 — 01/2026

Appif AI · Contract

`React` `Node.js` `Laravel` `Vue.js` `TypeScript` `Shopify API` `Stripe` `Socket.IO` `Redux Toolkit` `WebGL`

- Built **Storypop** — end-to-end Shopify video-commerce SaaS: TikTok/Instagram reel import, widget builder (4 types), embed SDK with cross-site token, analytics funnel, Stripe subscription & OAuth auth.

STATUS

Open to Flutter / mobile roles · Remote-friendly

- Built **Unobiz Business Portal** — 10-module B2B React+TypeScript portal with RBAC via custom `usePermission` hook, real-time order updates via Socket.IO, bulk Excel import, i18n EN/VI.
- Built **MeinPointOf.Sale** — Laravel eCommerce platform for print/POS industry: 10k+ price variants, 3D product configurator (WebGL), Stripe/PayPal/Sofort multi-gateway.
- Adopted Cursor / Copilot for boilerplate, TypeScript types from API contracts, Redux slices and multi-locale i18n sets across the three products; payment, token and video-pipeline code kept hand-written.

Full-stack Web Developer

04/2023 — 02/2025

Eye Design Sydney · Agency

`Laravel` `Vue.js` `Flutter` `MySQL` `Stripe` `Firebase` `WordPress` `Shopify`

- Built **SAFA Booking** — three-sided performer booking marketplace: Flutter performer app, user booking app, Vue admin dashboard on a Laravel API; Stripe escrow, Firebase real-time chat, server-side calendar conflict detection.
- Delivered WordPress, Shopify and custom landing pages for beauty-industry clients; built a salon CRM and booking web app; managed hosting and domains.

Web Developer

09/2022 — 03/2023

Công ty TNHH TM DV Công Nghệ Trí Lực

`PHP` `MySQL` `HTML/CSS` `JavaScript`

- Database administration, internal business websites, ad-serving platform logic and responsive landing pages.

AI-ASSISTED ENGINEERING

- **Context first:** architecture rules are written down (CLAUDE.md / .cursorrules) so Claude Code and Cursor generate code in the right layer, with the right names and templates — the same standard the team reads.
- **Spec → scaffold → review:** I write the spec per feature or domain, the agent scaffolds or ports against a template, every wave ships as a pull request I read line by line. AI drafts tests; I own the assertions.
- **Clear boundaries:** money flow, stock, locks, printer drivers and hardware are hand-written, tested on real devices and 100% human-reviewed. AI is a strong junior, not a decision maker.

SELECTED PROJECTS

Order POS — Restaurant POS/ERP Client (Flutter)

Lead Flutter developer · Nasys · 2026

`Flutter` `Dart` `Riverpod` `Retrofit / Dio` `ESC/POS` `Socket.IO`

Multi-tenant, multi-branch POS on Android, iOS and web: ordering, payments, kitchen tickets, inventory, HRM, tax. Clean Architecture + feature-first, hand-rolled ESC/POS printing, deep peripheral integration.

`~777K lines Dart` `24 + 15 modules` `440 use cases` `5 printer drivers` `325 test files` `5 locales`

OrderTable — Multi-tenant POS/ERP Backend

Full-stack · Nasys · 2026

`Laravel` `PHP` `MySQL` `DDD` `Socket.IO` `PHPUnit`

Pragmatic modular monolith: 19 self-contained domains, 698 use cases, 5 API surfaces sharing one business logic. Database-per-tenant with runtime connection swap, 608-key RBAC, custom Socket.IO broadcaster, FCM batch push, 6 e-invoice providers, VNPay/VietQR/mPOS.

`19 domains` `698 use cases` `~716 routes` `935 tests`

SAFA Booking — Performer Marketplace (Flutter + Laravel)

Full-stack · Eye Design Sydney · 2024

`Flutter` `Laravel` `Vue.js` `MySQL` `Stripe` `Firebase`

Three-sided ecosystem: Flutter performer app, user booking app, Vue admin dashboard. Stripe escrow holds funds until the gig happens; Firebase real-time chat; server-side calendar conflict detection so a performer can never be double-booked.

`3 apps` `Stripe escrow` `Realtime chat`
